

# Concept Map for Village Edge South Area – June 2013

The drawing below by EHH Committee member Don Ferlow was developed in part by the study group during the Randall Arendt workshop during May 2013. It intended to be conceptual and meant to show how a variety of sizes and uses of buildings could be incorporated into the zone while still safeguarding the features and assets the community wants protected such as viewshed, aquifer recharge and wooded areas while still allowing for substantial economic development in ways desired by the community. The conceptual layout for the major roads (with only two curb cuts on Rte 20) might also be a starting point for the “official map” concept that has been discussed.
